In re Application of ELVANOGLU et al.
Serial No. 10/047,302

Listing of the Claims:

1.   (Previously presented)   In a computer system, a method comprising:

receiving a page comprising content including one or more elements having

active content; and

controlling page output and any actions corresponding to at least part of the

content by:

1) interpreting at least one part of the page based on a first set of security

settings; and

2) interpreting at least one other part of the page based on a second set

of security settings associated with an element of the page, the second set of

security settings being different from the first set.

2.   (Original)   The method of claim 1, wherein receiving the page includes

accessing data received from a remote source.

3.   (Original)   The method of claim 1, wherein receiving the page includes

accessing data received from a cache.

4.   (Original)   The method of claim 1, wherein a first action is requested in

the content in the part of the page interpreted with the first set of security settings,

wherein a second action that is similar to the first action is requested in the content in

2

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

the part of the page interpreted with the second set of security settings, and wherein

controlling page output and any actions comprises, allowing the first action and

disallowing the second action.

5.   (Original)   The method of claim 4 wherein the first action corresponds

to a command to run a first set of script, and wherein the second action corresponds to

a command to run a second set of script.

6.   (Original)   The method of claim 4 wherein the first action corresponds

to a command to download a first set of data, and wherein the second action

corresponds to a command to download a second set of data.

7.   (Original)   The method of claim 4 wherein allowing the first action

comprises, prompting a user for a decision and receiving a response indicating that the

action is allowed.

8.   (Original)   The method of claim 4 wherein disallowing the second

action comprises, prompting a user for a decision and receiving a response indicating

that the action is not allowed.

9.   (Original)   The method of claim 1, wherein a first action is requested in

the content in the part of the page interpreted with the first set of security settings,

3

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

wherein a second action that is similar to the first action is requested in the content in the part of the page interpreted with the second set of security settings, and wherein controlling page output and any actions comprises, disallowing the first action and allowing the second action.

10. (Original) The method of claim 1 wherein the first set of security settings are based on an identifier of the source of the page, and wherein interpreting at least one part of the page based on a first set of security settings comprises, retrieving the set of security settings based on the identifier, and associating the settings with the at least one part of the page.

11. (Original) The method of claim 10 further comprising, constructing a tree to represent the page, and wherein associating the settings with the at least one part of the page includes storing data corresponding to the security settings at a node in the tree.

12. (Original) The method of claim 1 wherein the wherein interpreting at least one other part of the page based on a second set of security settings comprises, recognizing security data associated with the element, and associating the second set of settings with the at least one other part of the page based on the security data.

4

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

13.   (Original)   The method of claim 12 further comprising, constructing a
tree to represent the page, and wherein associating the settings with the at least one
other part of the page includes storing data corresponding to the second set of security
settings at a node in the tree that corresponds to the element.

14.   (Original)   The method of claim 13 wherein storing data corresponding
to the second set of security settings comprises negotiating the second set of settings.

15.   (Original)   The method of claim 13 wherein negotiating the second set
of settings comprises inheriting at least one setting in the second set based on security
information associated with a parent node in the tree.

16.   (Original)   The method of claim 13 wherein negotiating the second set
of settings comprises receiving at least one setting in the second set based on security
information associated with a child node in the tree.

17.   (Original)   The method of claim 1, wherein controlling page output and
any actions further comprises, accessing privacy settings.

18.   (Original)   A computer-readable medium having computer-executable-
instructions for performing the method of claim 1.

5

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

19-25 (Canceled).

26.   (Previously presented)   In a computer connected to a network, a

system comprising:

browser software that interprets content received from the network, and

a security mechanism that associates a first security zone with a first part of the

content and associates a second security zone with a second part of the content, the

security mechanism further operable to associate a first set of security settings with the

first part of the content based on the first security zone, and associate a second set of

security settings with the second part of the content based on the second security zone,

the second set of security settings different from the first.

27.   (Original)   The system of claim 26 further comprising, a negotiator that

controls the second set of security settings.

28.   (Original)   The system of claim 27 wherein the negotiator controls the

second set of security settings relative to the first set of security settings.

29.   (Original)   The system of claim 28 wherein the negotiator controls the

second set of security settings relative to the first set of security settings by having at

least one setting in the second set be inherited from a corresponding setting in the first

set.

6

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

30.   (Original)   The system of claim 26 wherein the first set of security settings is based on a network identifier of a source of the content.

31.   (Canceled).

32.   (Original)   The system of claim 26 wherein the second part of the content corresponds to an element in the content.

33.   (Original)   The system of claim 32, further comprising a component that detects security data associated with the element.

34.   (Original)   The system of claim 33 wherein the security data associated with the element comprises, a reference to a security zone.

35.   (Original)   The system of claim 33 wherein the security data associated with the element comprises, a reference to a file.

36.   (Original)   The system of claim 33 wherein the security data associated with the element comprises, a reference to a source of remote data.

7

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

37.   (Original)   The system of claim 33 wherein the security data associated
with the element comprises a string of data corresponding to at least some of the
security settings.

38.   (Original)   The system of claim 33 wherein the security data associated
with the element comprises information indicating that the security settings should be
determined relative to other security settings.

39.   (Original)   The system of claim 26 further comprising, a tree of nodes
constructed from the content, the tree including a first node corresponding to the first
part and a second node corresponding to the second part.

40.   (Original)   The system of claim 39 further comprising, a negotiator that
controls the second set of security settings.

41.   (Previously presented)   The system of claim 40 wherein the negotiator
evaluates the second set of settings.

42.   (Previously presented)   The system of claim 40 wherein the negotiator
changes at least one setting in the second set of settings based on a rule.

8

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

43.   (Original)   The system of claim 39 further comprising, at least one other node in the tree that is associated with security settings based on inheriting information from a parent node.

44.   (Original)   The system of claim 43 wherein the parent node comprises the first node.

45.   (Original)   The system of claim 43 wherein the parent node comprises the second node.

46.   (Original)   The system of claim 39 further comprising, at least one other node in the tree that is associated with security settings based on security data of a child node.

47.   (Original)   The system of claim 26 wherein the second part of the content corresponds to a frame tag in the content.

48.   (Original)   The system of claim 26 wherein the content comprises an HTML page.

49-54 (Canceled).

9

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

55.   (Previously presented)   A markup language document, comprising:

a first set of content associated with a first set of security settings; and

a second set of content associated with a second set of security settings, the

second set of security settings being different from the first set of security settings.

56.   (Original)   The markup language document of claim 55 wherein the first

set of content corresponds to a page, the second set of content is included in the page,

and wherein the second set of security settings take precedence over the first set of

security settings with respect to determining security for the second set of content.

57.   (Original)   The markup language document of claim 55 wherein the first

set of content corresponds to a page and the second set of content corresponds to a

frame element included in the page.

58-59 (Canceled).

60.   (Original)   The markup language document of claim 55, wherein the

markup language document includes a reference to a file that corresponds to at least

some of the second set of security settings.

10

In re Application of ELVANOGLU et al.
Serial No. 10/047,302

61.   (Original)   The markup language document of claim 55, wherein the
markup language document includes a reference to a source of remote data that
corresponds to at least some of the second set of security settings.

62.   (Original)   The markup language document of claim 55, wherein the
markup language document includes a string of data that corresponds to at least some
of the second set of security settings.

63.   (Original)   The markup language document of claim 55, wherein the
markup language document includes information indicating that at least some of the
second set of security settings should be determined relative to other security settings.
